WORK EXPERIENCE

Cambium Networks, Bangalore Dec, 2024 - Present

Senior Engineer (SDE 2)

- Leading the migration of the Monitor Module in enterprise level Network Management Platform(cnMaestro) from AngularJS to React, architecting the frontend to handle telemetry for 10k+ active network nodes and sites.
- Optimized server-state management using TanStack Query, implementing caching and request deduplication logic to avoid redundant API calls, resulting in a significant reduction in network overhead.
- Architected a high-performance interface showing 1,000+ sites list, leveraging TanStack Virtual to implement a virtualized infinite scroll that reduced DOM overhead by 90% and ensured consistent rendering.
- Developed Design System for the cnMaestro, delivering a private NPM package of 40+ accessible, atomic React components that standardized UI/UX and visualization across the platform. By integrating Storybook documentation and maintaining 90% unit test coverage, accelerated cross-team feature delivery and ensured seamless architectural migration.
- Followed a test-driven development (TDD) culture by authoring extensive unit and integration test suites, achieving 90%+ code coverage across the Monitor module and Design System to ensure architectural stability and deployments with minimal regressions.

Gemini Solutions, Gurugram Feb, 2022 - Nov, 2024

Software Engineer

- Developed responsive and modular UI components using React and MUI, optimizing reusability. Managed application state effectively with Redux.
- Led frontend development in Angular, implementing dynamic hierarchies, MSAL auth, CRUD, and search operations, reducing manual effort by 25%.
- Optimized HR processes by designing generic, responsive layouts for an internal HRIS tool, boosting efficiency.
- Built scalable AWS Lambda functions with Node.js, leveraging Neo4J, MongoDB, and S3 for efficient data management in async operations.

EDUCATION

RKGIT Ghaziabad Aug, 2018 - Jun, 2022

BTech in Information Technology CGPA : 9.05/10

SKILLS

- **Frontend:** React, JavaScript, TypeScript, Angular, Tailwind CSS, RxJS, Redux
- **Backend:** Node.js, Express.js, REST APIs, Microservices
- **Database:** MongoDB, MySQL, Neo4j
- **Technologies & Tools:** AWS (S3, Lambda), CI/CD, Git, GitHub, GitLab, Jira, Postman

PROJECTS

- **cnMaestro:** A centralized network management platform for large-scale monitoring, configuration, and orchestration of thousands of wireless and wired networking devices
- **Model Portfolio:** An analytics dashboard for tracking and visualizing portfolios and market-specific stock performance.
- **Organizational Hierarchy:** A dynamic visualization tool for mapping complex corporate structures with multi-level role segregation and custom views.
